
GABRIEL GARCÍA GARRIDO

// SOFTWARE AND ELECTRONIC ENGINEER

gabigarciagar@gmail.com In/gabriel-garcia-garrido @Gaboxondo

PROFILE

Originally from Málaga, a beautiful coastal city in southern Spain (Andalusia), I have been based in Madrid for the past 12 years. My international experience includes living in the USA (Florida and New York City), where I completed part of my collegiate studies on a scholarship.
I am a passionate learner with diverse interests. My hobbies include playing guitar and drums, skiing, music production, cooking, and photography. Programming is not just my profession but also a hobby—I constantly explore new technologies and frameworks.
I am an avid maker and technology enthusiast. I maintain my own electronics lab and 3D printer, where I design and build robots and custom hardware solutions, applying the principles from my engineering background.
While much of my professional work resides in private corporate repositories, I actively maintain personal projects and Proof of Concepts (POCs) on GitHub. I am continuously publishing new experiments and open-source contributions.

EXPERIENCE

GFT — Backend Microservices & DevOps Engineer

May 2024 - Current

Contributed to the development of a financial adjustments system for a German banking institution within a microservices-based architecture.

Built reactive microservices using Spring WebFlux and deployed them on Google Cloud (Cloud Run, Pub/Sub, Dataflow, Composer). Contributed to cloud-native architecture design, focusing on scalability, resilience, and event-driven patterns.

Additionally, led DevOps practices using GitOps with GitHub, enabling automated and consistent deployments.

Actively introduced and promoted microservices best practices within the team, including Outbox pattern, Hexagonal Architecture, Domain-Driven Design (DDD) for domain modeling, and resilience techniques aligned with distributed systems architecture.

COGNIZANT — Lead Microservices Architect & DevOps (Full Stack)

Jun 2022 - Apr 2024

Architecting for a leading German insurance firm. Key responsibilities:

• **Infrastructure Migration:** Orchestrated the migration from Cloud Foundry to Kubernetes (K8s), including comprehensive Helm chart generation and DevOps pipeline modernization.
• **Architecture Refactoring:** Led the redesign of a legacy "distributed monolith" into a robust, scalable microservices architecture. Addressed critical design flaws, ensuring proper DDD encapsulation, authentications flows, and service scoping.
• **Standardization:** Established best practices for logging, versioning, and microservice patterns across the organization.

MINSAIT — Azure B2C Developer

Jan 2022 - Jun 2022

Executed the end-to-end authentication implementation for a major French insurance company using Azure B2C custom policies. Developed complex user flows (password recovery, MFA, OTP via SMS) and integrated Azure Functions for custom logic extensions.

Azure B2C Developer
Jan 2022 - Jun 2022

Executed the end-to-end authentication implementation for a major French insurance company using Azure B2C custom policies. Developed complex user flows (password recovery, MFA, OTP via SMS) and integrated Azure Functions for custom logic extensions.

Microservices Developer & Architect
Oct 2019 - Jun 2022

Designed Spring Boot microservices architectures utilizing asynchronous non-blocking patterns (CQRS) and advanced domain modeling driven by Domain-Driven Design (DDD) principles.

DevOps Engineer
Dec 2019 - Jun 2022

Built comprehensive CI/CD ecosystems using Jenkins and Bamboo. Implemented auto-versioning, automated deployments, and quality gates with GitFlow strategies. Managed centralized Helm chart repositories for diverse technology stacks.

Cloud Engineer
Nov 2019 - Jun 2022

Architected and managed cloud infrastructure on Azure Kubernetes Service (AKS), incorporating Azure AD authentication. Transitioned early-stage architectures towards robust microservices patterns.

Backend Developer
Oct 2017 - Jun 2022

Core backend development for web services using Java and the Spring Boot framework.

TECNATOM — Product Development Engineer (Robotics)
Aug 2015 - Oct 2017

Developed firmware, 3D models, and PCB designs for industrial ultrasound inspection robots. Responsibilities included mechanical design, electronics engineering, and low-level robotics software programming.

Product Development Engineer (Robotics)
Aug 2015 - Oct 2017

Developed firmware, 3D models, and PCB designs for industrial ultrasound inspection robots. Responsibilities included mechanical design, electronics engineering, and low-level robotics software programming.

R&D Department
Feb 2015 - Aug 2015

Engineering Internship
